CONTENTS

SHIPBUILDING

To the 50th anniversary of A.S. Buzakov..... 8

A.S. Buzakov. *Experience of construction of corvettes at the
Severnaya Verf Shipbuilding Yard Ltd*..... 8

The Severnaya Verf Shipbuilding Yard Ltd having won the tender for the construction of the project 20380 corvettes for the Russian Navy concluded a contract for their construction. The first corvette Steregushchy has been laid on the 21st of December 2001 and launched on the 15th of May 2006.

In line with the construction of two more ships the yard carries out in cooperation with the "Rosoboronexport" marketing studies and together with the "Almaz" central design bureau prepares offers on the export modification of the corvette (pr. 20382).

*Almaz shipbuilding company Ltd contributes to Russia and
St. Petersburg*..... 13

The article familiarizes with the results of the company's activity in 2005-2006 including construction of a new project 21630 "Astrakhan" gun ship of river-sea type, describes plans for future and tells about their unusual work under the fountain system installed in Neva aquatic area in St.Petersburg.

T.D. Khuziyatov. *World container fleet. Quo Vadis?*..... 15

The main tendencies of container fleet development in Russia have been analyzed. Variants of using large container-carriers for different traffic lines with consideration of ports abilities have been considered.

O.M. Zhuravlev. *Structural features of timber-carriers designed
to carry packaged lumber*..... 19

Development of the Russian timber-carrying fleet and technical-and-operational characteristics of timber-carriers and packaged lumber carriers is considered in the article. Compliance of structural features of such ships and methods of securing deck cargo with the modern requirements of efficient cargo handling at the minimal use of dockers' and crew labor as well as with conditions of preserving cargo in the process of its transportation by sea and safety of cargo logistics has been analyzed. The main distinctions of structural characteristics of foreign short-range ships as well as lay-out and securing of timber have been considered. Basing upon the conclusions made in reference to specific features of timber carrying operations in the Northern and Baltic marine basins of Russia the most optimal structural type of a ship with deadweight of 4000 t has been offered. The vessel is intended for packaged lumber, containers and bulk cargos carriage.

A.M. Chulkov. *Study of design and catching characteristics
of fish-factory trawlers*..... 26

Approach to fish-factory trawlers designing by means of harmonizing their design characteristics, architectural-and-structural features, catching and processing capacities.

S.N. Klimashevsky, A.V. Silin. *Contact-free transport
of Arktica*..... 31

In connection with the intensification of hydrocarbon sites development in the Far North regions demand for ships and ice-breakers used to transport this raw-material to consumers rises rapidly. It is offered to complete traditional means of transportation with contact-free means i.e. submarines, and to use air-ships and helicopters instead of automobile cars.

The authors invite readers to start discussion.

ENGINES, EQUIPMENT AND CONTROL SYSTEMS

G.M. Basalygin. *Dynamical equation of turbo-compressor's rotor
of marine internal combustion engine gas turbine super-charging
system*..... 40

Dynamical equation of turbo-compressor rotor being an integral part of its dynamical mathematical model.

“Control systems and equipment “ Ltd 42

V.F. Souslov. *Development of high technologies in marine machine-building is a basis for the compatibility of the Proletarsky zavod Ltd (to the 180th anniversary of the company) 45*

The article familiarizes with the history of the work development as well as with the exploration and manufacturing of sophisticated units of marine machine-building. The main attention is paid to the development of modern underwater manipulators for the Navy, systems for sea cargo-handling operations, and take-off and landing complexes of aircraft-carriers.

V.A. Solon'ko, V.N. Kruglevsky, V.A. Kolesnik. *Monitoring of fire safety in ship spaces as a task of image recognizing 49*

The possibilities of developing fire safety systems as image recognizing systems have been analyzed.

The algorithms of recognizing fire hazardous situations are offered.

Corabel.ru search engine (participants of the section) 51

ENVIRONMENTAL SAFETY

V.K. Goncharov. *Environment effects assessment of the natural gas leaks and discharges from the Black sea pipeline “Blue Stream” 56*

The problem of export in the upper layer of sea and in atmosphere of a toxic carbon sulphide saturating depth water masses as a result of natural gas release from corrosion wormholes or at breakup of tubes of “Blue Stream” pipeline lined in the Black Sea is considered. The mathematical model of the carbon sulphide transportation by floating containing methane bubbles is applied. This model takes into account the transition of gas methane into crystalline hydrate of methane under great pressure and low temperature near seabed with dependent gas bubbles transformation into solid globules, and their backward transformation near horizon where hydrate occurrence is impossible. The probable fluxes of carbon sulphide in the photic layer of sea and in atmosphere are computed and the space scales of pollution zones are estimated. It is stated that negative effects will have local character and will not appreciable injury on the marine and coastal ecosystems.

SAFETY OF NAVIGATION

V.E. Novikov. *Choosing of an optimal place for anchorage 62*

The method of using an anchorage place for a ship with consideration of hydrodynamic and wind-and-wave conditions in a certain region is proposed.

N.I. Rodichkin. *Navigational resources of linear navigation ranges 64*

Analysis of recommended for use methods of creating navigational resources has been carried out. A new method of designing ranges based on navigational reserve that provides any preset probability of navigational safety has been proposed.

MARINE EQUIPMENT: SCIENCE AND TECHNOLOGIES

A.S. Achkinadze. *A generalized optimum condition for finite blade screw propeller with take into account ship hull 69*

Paper conduct the state of the art and generalization of Betz-Polychov's theorem on case finite blade wake adapted screw propeller. Some practical and experimental results are discussed.

S.V. Gorin, O.V. Makarova. *Defining of acoustic parameters of oscillations transmission in waveguides containing segments with transverse section shock 77*

Authors and advertisers are responsible for contents of information and advertisement materials as well as for use of information not liable to publication in open press.

Reprinting is allowed only with permission of the editorial staff.

Supreme Examination Board Bulletin № 3, May 2004:

The Morskoj Vestnik magazine is entered on the list of the leading scientific magazines and editions published in the Russian Federation where basic scientific outcomes of doctoral dissertations shall be published.

Calculation-and-experimental methods of defining acoustic parameters of transmitting oscillations in liquid media within side waveguides of different shape and make have been developed. They make it possible to reduce considerably the cost and time necessary to carry out acoustic trials of a hydraulic system components. The method has been tested on existing constructions and is being used on practice.

A.N. Kalmykov. <i>Combined electrochemical system and estimation of the expediency of its use within marine electric plants</i>	80
--	----

The possible use of a combined electrochemical system within the set of electrochemical power plant of an underwater technical mean has been considered.

E.V. Sokolova. <i>Substantiation of laying-out decisions while designing high-speed catamarans</i>	85
---	----

The pattern of solving laying-out task by means of choosing the most rational variant of the following individual tasks has been considered: planning, designing and hydrodynamic lay-outs. It will permit to ground design characteristics of catamaran and its subsystems.

V.E. Vyazovikov, M.A. Mourashov. <i>Computer-aided calculation of ship's static for offshore marine structures</i>	91
---	----

Detailed analyses of the modernization of "Statica" software developed by the Rubin central design bureau for ship's statics calculation is given. The possible ways of its use are shown. The versions of the Statica software have been adopted for operation since 2003 and have certificates of approval issued by the Russian Shipping Register.

Some promising developments are outlined.

B.M. Sakhnovsky. <i>Propulsive characteristics of high-speed catamarans</i>	97
--	----

Influence of bulbous bows and underwater wings on power and propulsive characteristics of different types have been analyzed.

The experimental and statistical data obtained permit to carry out preliminary design estimation of high-speed catamarans power plants output. However while performing an optimization project analysis it is necessary to use more precise mathematical models for defining propulsive properties of catamarans than usually. They should take into consideration influence and ratio of main particulars, horizontal clearance, relative speed, operational conditions, type of underwater wings etc at ship's speed and output of engines.

S.V. Gorin, S.V. Okulovskaya. <i>Extending of stern tube bearings life</i>	103
---	-----

The results of analyzing of structural make of shaft-line with a bearing are given. A method of reducing tension in a bearings shell is offered.

V.I. Babiy. <i>Specific error of measuring vertical distribution of sound in sea water</i>	105
---	-----

It is shown that during vertical sounding of marine media a specific methodological error arises due to uncertainty of depth measuring. The radical method of reducing a structural error at vertical sounding of marine media consists in co-ordinating of limit errors of channels of directly measured parameters and of the depth measuring channel and in enhancing accuracy of measuring depth (pressure) up to the level of working references.

I.A. Ryabinin. <i>Logic of safety theory and real world</i>	109
--	-----

Possibilities of safety theory logics are shown with the use of certain examples. For instance, while estimating the state of different systems or of one system in different circumstances with the help of unbiased characteristics of the "weight" of arguments within the logical function of the system's hazards.

A.P. Matlakh. <i>Monitoring of a ship's strength in ice conditions</i>	113
---	-----

A calculation technology that provides quick monitoring of ships strength during navigation in ice has been considered.

A method of composing of onboard intellectual systems based on efficient mathematical apparatus using up-to-date principles of data processing has been offered.

AT THE BOOK-SHELF

<i>Two books devoted to the problem of using shore-based and ocean resources</i>	117

HISTORY OF SHIPBUILDING AND FLEET

L.M. Doulitch. <i>Origination of the Russian Navy</i>	120
--	-----

The article familiarizes with the system used to recruit foreign experts to the Russian fleet, role of Peter the First in this process, conditions of their recruiting and service.

O.K. Bumaj, N.V. Shiskova. <i>S.F. Yuriev – museum organizer, ship models designer</i>	125
---	-----

The article familiarizes with the biography of S.F. Yuriev – connoisseur of naval history of Russia, perfect model designer, author of the projects of decorating central sluices of Moscow-Volga channel, sketches according to which Ushakov and Nakhimov medals and orders were manufactured during the World War II.

His works decorate expositions of the Central Naval Museum.

<i>To the 75th anniversary of Y.V. Varganov</i>	128
--	-----

I.M. Kouzinets. <i>G.V. Uvarov – creator of a high-speed underwater rocket</i>	129
---	-----

The article familiarizes with the biography of a Doctor of technical sciences, Academician of International Informatization Academy, I-rank Captain, Chief Designer, Head of the Region Design Bureau G.V. Uvarov, professor of the aerospace faculty of Moscow Aviation Institute. Special attention is devoted to his contribution into the development of a unique high-speed underwater rocket called "Shkval".
